

Technical name:

# Ferrosilicon Calcium Aluminium

# Ferrosilicon Calcium Aluminium

(0,0 x 1,0 mm)

Inoculant for Grey Cast Iron or Nodular Cast Iron.

Ferrosilicon Calcium Aluminium is a ferrosilicon alloy with controlled contents of calcium and aluminum. It is used as an inoculant for grey or nodular cast iron. In its generic use has a graphitic and desulphurizing effect. It reduces chilling much more efficiently than FeSi STD.

## Chemical Properties (%)

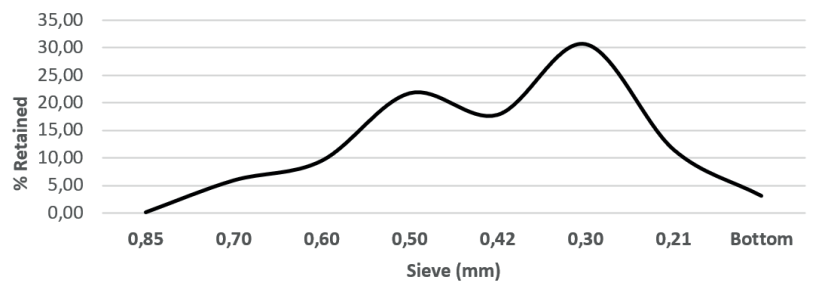

### ELEMENTS (%)

Si (min)	Ca (max)	Al (max)
68	0,80 a 1,20	0,80 a 1,20

### GRAIN SIZE (%)

Sieve (mm)	0,00	1,00
Through	≤ 10,00	-
Retained	-	≤ 5,00
